The Castle Route

German roads will get you there. But why miss the sights by heading straight down the autobahn at 80? Holiday routes have been arranged not only to ensure unforgettable memories but also to make up an idea for a holiday n itself. How about a tour of German castles?

The Castle Route is 200 miles long. It runs from Mannheim, an industrial city on the Rhine with an impressive Baroque castle of its own, to Nuremberg, the capital of Bavarian Franconia. The tour should take you three days or so. We recommend taking a look at-27 castles en route and seeing for yourself what Germany must have looked like in the Middle Ages. The mediaeval town of Rothenburg ob der Tauber is intact and unspoilt. Heidelberg is still the city of the Student Prince. In Nuremberg you really must not miss the Albrecht Dürer House.

Come and see for yourself the German Middle Ages. The Castle Route will be your guide.

America could do worse than te some of the fractured feelings the Germans view the anniv-

olitical terms, and in relation to bwn objectives, the war ended in ing defeat, a near-disaster, for

Britain and France went to war in 1939 to defend the freedom of Poland. They had no immediate territorial dispute with Hitler.

Their decision to declare war on the Third Reich was based mainly on the need to defend from totalitarian hunger for expansion the smaller countries' right to self-determination.

It is to Britain's eternal credit that it unflinchingly upheld this wartime objective and more than once rejected peace moves by Hitler.

Britain refused to consider peace terms after the defeat and division of Poland and even after the capitulation of France when it stood entirely alone against a Eurasian land-mass controlled and shared by the two dictators.

That makes it even harder to appreciate how far short of this war objective the outcome was, although it is easy to imagine that in view of Hitler's crimes all efforts were increasingly concentrated on merely defeating him.

But how could the West possibly forget who they had joined forces with to attain this objective? How could it forget that it was Stalin who had enabled Hitler to wage war in the first place?

How, indeed, could it forget that it was Hitler, not Stalin, who broke their pact and forced the Soviet Union to side with Britain, and later America, against Germany?

How could it possibly go as far as to cede eastern Poland to the Soviet Union, virtually ratifying in retrospect the borders agreed by the terms of the 1939 Ribbentrop-Stalin pact?

President Roosevelt, in a combination of self-importance, naivete and

lessness, has long have made Stalin cession he demanded. Churchill, who never entirely lost sight of Britain's initial objectives, gave resistance person who warned away too much to he gave him (Stalin) all he could without

that Roosevelt did more than give him what he could. Nine nations totalling nearly 100 million people came under Soviet hegemony between 1944 and 1949.

A series in the Hamburg newsweekly Der Spiegel only recently called to mind the blackmail and barbarous brutality with which the Soviet Union set about

The course of events also testified to the guilty indecision with which the democracies betrayed both their own objectives and the hopes of others.

So only the Soviet Union has any real occasion for celebrating the anniversary unconditionally and, tellingly, many of

Germans still in quandary over end-of-the-war anniversary

President Reagan is visiting Germany for three reasons which have little to do with each other.

summit in Bonn. Then he wants to underline German-

American friendship. The third is to recall the 40th anniversary of the end of the Second World

War and the Germans' liberation from Hitler's dictatorship. Taken individually, each of these would have given Bonn enough prob-

The Western economic summit might suffer from the geographical and perhaps provincial confines of Bonn.

President Reagan's tour of Germany is likely to be fraught with security risks.

It is likely to trigger demonstrations and political unrest and thereby upset the picture of harmony it is hoped to

As for ceremonies to mark the 40th anniversary of the end of the war, the Germans themselves still don't know what to do.

They are still sounding out the options.

There are some far-reaching reservations because, after all, it is not easy to celebrate one's own defeat with the

Even for those who are convinced the war's end meant liberation for Germany, there are still the practical difficulties of when, where and with whom to celebrate.

Many, including the Bonn govern-

ment, are still learning the ropes, and now President Reagan has been involved, with inevitable and unfortunate side-effects.

The embarrassments now include a letter from the CDU leader in the Bonn Bundestag, Alfred Dregger, criticising US Senators because some sections of American public opinion happen not to share his, Dregger's, views.

That is one way of creating the im pression that bids are under way to make domestic political capital out of

It would have been best for Bonn and Washington not to have tried to do three things at once.

They would then at least not have been in such a predicament, but now they are, they will probably have no choice but to go ahead with the proдгаште.

They are unlikely to find the going

(Westdeutsche Allgemeine, Essen, 22 April 1985)

Bonn being bound to be unsettled, the Social Democrats would like to gain themselves a hearing by holding demonstrations of their own.

The Christian Democrats made their voice heard before the summit when, together with the Catholic and Protestant churches, they held a meeting entitled The Economic Summit and the Third World: Joint Future for North and South?

Yet many Christian Democrats, not to mention people of other party-political persuasions, wondered what the point of this particular exercise was. The CDU, Christian Democrats critically argued, had no need to hold a "happening" of its own on the summit.

The organiser of the meeting, Karl Lamers, replied that the CDU had every good reason for taking the economic summit as an occasion for a closer look at relations between the Third World and the industrialised countries.

Herr Lamers is a Bonn MP and chairman of the CDU development policy committee.

It wasn't just a matter of the future of the developing countries, he said, who were hardest hit by international economic upsets and failures yet not represented at the summit.

The CDU had to demonstrate at the meeting that its development policy was comprehensive, dealing with all the political and economic aspects of Third World ties.

The CDU leader, Chancellor Kohl, was to make this point clear in a fundamental policy address on development

As Bonn Chancellor Herr Kohl has so far been as little inclined to commit himself on development policy as his predecessor Helmut Schmidt, who was a latecomer to North-South policy.

Development policy debates in the Bundestag are usually held late in the evening. Chancellor Kohl, like Chancellor Schmidt before him, tends to be conspicuous by his absence from the rostrum.

Continued from page 1

manner as the East Bloc's liberator. The most the West can do is to recall its resolve (better late than never) to resist Hitler's plans for world dictatorship and to regret that the resolve was abandoned so soon.

1945 was a victory year for democracy but also the greatest-ever defeat for the democratic principle in support of which the West went to war.

In February 1943, Ernst Jünger seen chalked on walls in Paris.

"Who knows?" the poet wondered. Washington meeting said, be able to "Maybe Stalingrad will mark the bemeet their borrowing requirements in ginning of the end for the walls of Pathe normal way, meaning at market

Over and above ceremonial routine VE Day remains riddled with contradictions for the West, victory and defeat in

Hitler's end may be celebrated and the war dead called to mind. But from then on the questions arise.

> Bodo Schulte. (Nordwest Zeitung, Oldenburg, 19 April 1985)

Strauss goes on offensive again

Nordwest WZ

It is usually foreign affairs that irri-Lates Franz Josef Strauss, chairman of the Christian Social Union, the Bavarian wing of the governing conservative

Now he has caused raised eyebrows by seeking talks with Chancellor Kohl over a range of domestic issues.

The list of complaints is long, running from the right to demonstrate to the Auschwitz Lie affair.

The CSU thinks the government is losing its way on domestic issues. Strauss' intention is getting at the Free Democrats, junior coalition partner.

A prominent CSU member in Bonn said the FDP must be told what goes and what doesn't.

It is, then, not surprising that the agreement last December between CSU/CSU and FDP legal experts on the reform of the right to demonstrate was described without further ado by the Bonn CSU state organisation as a "draft of a compromise".

According to the official wording the FDP let themselves be talked out of the much- disputed prohibition against disguise in demonstrations and talked out of apparent concessions in the parliamentary dealings about identity cards that would be secure from falsification.

Since the coalition negotiations in the spring of 1983 the positions of the government political parties are practically unchanged. A few senior CSU members would concede that in some ways matters are "basically improved".

Discussion between the conlition leaders has got much better since Martin Bangemann took over as chairman of the FDP from Hans-Dietrich Gensch-

The relationship between Kohl and Genscher has not been disturbed by

Despite coalition discussions there are still as many gaffes as ever.

Bangemann recently unleashed a storm when he unthinkingly expressed the view that the government's pensions policy had not been fully revealed. The matter has just been cleared away, so it

Bangemann obviously enjoys a good reputation among CSU members. Nevertheless the public image of the coalition is more confused than clear.

But there has been a lack of clarity and leadership for a long time.

The points can be quickly listed: Conitiative, differences of opinion on early retirement for armed services officers. confusion about pensions policies and differences of opinion on legal policies.

It does not help to ask the Chancellor. Leadership is demanded from him

This complaint is being made not only by the FDP and the CSU but from within the ranks of the CDU itself.

■ TERRORISM

Libyan arrested after man is shot dead in Bonn

On Easter Saturday a 29-year-old Libyan, Fatahi el-Tarhouni, shot and killed a 30-year-old fellow-countryman, Gebril el-Denall, in a Bonn city-centre street. seriously injuring two German bystanders. Denali was an opponent of Libyan leader Col. Gaddafi. Tarhouni has admitted his motives were political.

few hours after the Bonn murder A an uneasy suspicion struck officials at the Bundeskriminalamt, or Federal CID, in Wiesbaden.

At 8 p.m. it notified the North Rhine-Westphalian Interior Ministry in Düsseldorf that the man arrested and charged with murder, Fatahi el-Tarhouni, could be the same person as a Libyan by the name of Tahurni who for weeks had been known to be planning to kill an opponent of the Libyan regime in

He had now done so and clearly been advised by a man who was known to have worked as a gunman for the Libyan regime in Italy.

In a memo wired to all relevant police departments the Bundeskriminalanu had warned the authorities well in advance that an assassination was planned.

It had even included a list of 10 people, including Denali, the gunman could well have on his hit-list.

At the same time the BKA said that a Sahib Rashid was likely to be Tahurni's

The authorities ought by this stage to have been warned. Rashid is one of the three men who rank alongside, or may even be superior to. Libyan secret service chief Younis Belgassem in Tripoli. He is wanted by the Italian police for the murder of another Libyan.

His name was circulated by Interpol and he was arrested by the French police in 1983. When the Libyan authorities virtually held two French citizens hostage, the French authorities eventually deported him to Libya.

The Italian Justice Ministry had beforehand taken good care not to apply to the French for him to be extradited to

Libyan exiles concluded that Col. Gaddafi's killers were virtually at liberty to move around Western Europe as they saw fit; otherwise foreigners in Libya were likely to be harassed.

At the end of March several former staff members of the Libyan people's bureau, as Libyan embassies are known, in London are said to have met in Brussels to coordinate fresh moves against Libyans in exile.

The conspirators were men who were in Britain after the shooting outside the Libyan embassy in London and are reported by opponents of the Libyan regime to have been in Munich too in the New Year.

Libyan exiles in Germany have come to suspect, by a combination of speculation and inside information, that the Bundeskriminalamt maintains fairly close ties with the Libyan authorities.

Suspicions have been known to reach the point at which the BKA is said to have prevented the arrest of a pro-Gaddafi Libyan süspect.

Regardless of such accusations Belgassem is known to be on good terms

with high-ranking BKA officials and to have helped the German authorities to track down German terrorists trained at Palestinian guerrilla camps.

Decision-making in Libva seems to depend on both the confused domestic situation and political rivalries.

At least seven competing secret service agencies are known to be keen to carry out the Libyan leader's wishes, with priority having been assigned to assassination bids abroad by the Libyan People's Congress, or Parliament.

Stronger domestic opposition, culminating in an attempted coup put down last May, so upset Col. Gaddafi that he ordered the liquidation of opponents who had settled abroad.

Technocrats in his government service evidently first tried to get Col. Gaddafi's opponents extradited, which would have forestalled foreign policy

Belgassem is said to have given an assurance there would be no more assassination bids in Germany. It was an assurance that was withdrawn at the end of February

The Libyan authorities had previously sought in vain to cook up offences that would have jeopardised the exiles' status with regard to political

> Since 1983 the Pentagon has stepped up attempts to link research contracts awarded to universities with undertakings not to allow foreign scientists to have

anything to do with the contract. The Freedom of Information Act, which in principle ensures freedom of access to all official documents in the United States, was drastically reduced in scope last year with the approval of the Supreme Court.

The Pentagon has made sure it is given an increasingly say in approving exports to Western Europe.

But what worries observers most is Defence Department legislation in the pipeline that would make the export of critical technical data on, say, semiconductor or biotechnology basic research to Western Europe subject to government permission.

This procedure at present applies only to exports to Eastern Europe. The Bonn report sounds a strong warning, saying:

"If this legislation is enacted the result would be substantial restrictions on the amount of technical data that could be relayed to students, research scientists and industrial staff and firms in Western

An interesting light on Pentagon policy shed by a regulation numbered 2040.2 and issued in January 1984. It lays down the yardsticks by which export permits to East and West are to be measured.

Defence-related technology is to be treated as a "valuable and limited national security resource." The crucial factor is whether the recipient backs the United States in the Cocom committee that coordinates exports to the East Bloc and whether the exports might adversely affect the technological advantage enjoyed by the United States.

In 1984 the US Trade Department lent the Pentagon backing by warning that if Western Europeans were nnot cooperative in strictly abiding by regulations on exports to the East Bloc exports of critical technology would no onger be permitted.

German firms are increasingly complaining that they are deliberately and consistently being barred from basic research projects in the United States.

Messerschmitt-Bölkow-Blohm, the Munich-based acrospace group, has already outlined its fears on this point to a North Atlantic Assembly delegation which is looking into the subject.

A poll of 21 leading German firms has

revealed complaints of being cut out of work on the latest US prestige project, the VHSIC (short for Very High-Speed Integrated Circuit) programme.

VHSIC amounts to preliminary work on a super-fast new computer, and technology transfer to the West on projects of this kind is currently running at virtual

It has proved extremely difficult to circumvent US restrictions on the relay of data on, say, a Nato frigate that is to be jointly developed.

It was no less troublesome persuading the US authorities to waive regulations requiring the Berlin Senate to regularly brief US agencies in the divided city on the use to which a modern US computer was being put.

The Bonn report doubts whether fear of technology transfer to the East Bloc is the sole idea behind this trend. Washington attorney Werner J. Stein, one of its authors, writes:

"A Pentagon basic research budget rapidly increased in recent years, coupled with contractual transfer restrictions and export controls, is designed to restore and enhance the predominance of American technology in the world."

In view of this national contract policy and the dense array of restrictive regulations the prospects of greater consideration for European companies were not

The explosive nature of this development is self-evident. The Bonn government is working on the assumption that German participation in America's SDI research programme will only make sense if an "open exchange of information" is assured.

Bonn does not yet seem to be clear whether this open exchange is going to be possible and how it is to be ensured. But one point is clear in the German capital: there are going to be negotiations to counteract the trend. Klaus-Ulrich Moeller

Row over decision to pick US aircraft-recognition system

counterweight on this side of the At-

Herr Wörner had to admit that despite strenuous and protracted efforts he had failed to persuade other European countries to back the Siemens sys-

The friend-foe recognition system is a relatively modest project in financial terms. So are all other projects so far undertaken when compared with what might result from the US Strategic Defence Initiative.

So the time has come to take a closer look at possibilities of transatlantic arms cooperation.

Is SDI either strategically necessary or politically meaningful? Such questions, which have not yet been answered by any means, initially held pride of place, especially in the Federal Repub-

But the US initiative will also be an unprecedented test of the desire for industrial and technological cooperation between Europe and the United States.

So those who have promptly welcomed the latest US plans and favour immediate and unconditional approval of participation in the SDI programme may fairly be accused of being somewhat starry-eyed.

SDI is still extremely vague in outline and despite billions invested will for

Handelsblatt

years progress no further than the draw-

Supporters of participation may feel confident of a fair slice of the SDI cake if the idea is promptly endorsed, but hopes are unlikely to be sustained by one European country or another going

In France and Italy, and even in Britain, SDI is being discussed much more level-headedly and less noisily than in Germany - yet critically too, even at

So the German government could do worse than refrain from making further statements unlikely to clarify matters and wait instead until WEU Defence and Foreign Ministers confer in Bonn on 22 and 23 April.

The Western European Union was only last year resurrected from virtual oblivion, and Bonn Foreign Minister Hans-Dietrich Genscher has been one of many politicians who have said it must be realigned as a useful instrument in European arms cooperation.

If this is to be done, SDI must clearly be an item on the Bonn conference agenda. British and French officials can

then be asked, for instance, how they reconcile SDI participation with their independent nuclear deterrents.

The aim of SDI research is, in the final analysis, to make tactical and strategic nuclear weapons even politically in-

Reactions in Washington to the WEU conference may then give a clearer idea of the extent to which the Americans are prepared to consider a genuine exchange of technology and a two-way traffic in the arms sector within the SDI research framework.

The self-interest of US industry is well known not to be the only obstacle. The US Defence Department is unlikely to forget in a hurry its fears of leaks between Western and Eastern Europe.

The Pentagon has now been given a say in the export of sensitive technology even to Nato countries in Western Eu-

In the military strategy debate on SDI it must not be forgotten that even swift integration of all available technologies to produce defensive weapons in outer space is unlikely to revolutionise war-

Former Nato supreme commander in Europe and US Secretary of State Alexander Haig once noted in a Handelsblatt interview that every technological breakthrough in weapons technology has so far been followed by a corresponding counter-system.

"The history of warfare," Mr Haig said, "is one of evolution, not revolu-

More people are retiring earlier and the ratio of working people to people in retirement is dropping. This means that pension funds need more money. Employment Minister Norbert Blüm is now thinking of increasing the age of retirement in certain circumstances. The government is also considering changing the system of payments so that instead of the current system whereby employers and employees pay equal amounts based on size of salary, company performance would be taken into account. The Social Democrats have proposed a tax on machinery, but Blum has rejecteed this. Here Michael Brandt, in the Kölner Stadt-Anzeiger and Peter Jentsch, in Die Welt, look the the various proposals for altering the pension-

Social Democrat proposal for a tax A on machinery to increase pension fund contributions has been rejected by the Employment Minister, Norbert

The "robot tax" proposal would have meant that capital-intensive companies with few workers would have had to pay more than companies with more workers and less machinery.

The SPD's aim is to increase the pension insurance's income. Employers who gave more employment to robots rather than people should not be able to

disregard their social responsibilities. Instead, the government is considering a change in the system.

At present, employers and employees pay equal amounts based on size of pay. But the government is thinking of linking it to production.

A formula using turnover and profits or dividends and deducting cost of materials would be devised.

The idea is not new. Something similar was proposed in the late 1970s by a former SPD Employment Minister, Herbert Ehrenberg, and his state secretary at the time, Anke Fuchs. It was almost unanimously rejected.

Pension insurance has become more delicate a matter in the middle of the 1980s, however. The outlook for the next 10 years is alarming.

It is questionable if a robot tax on employers would save the situation.

Changing the pensions system, a company's competitive position and the labour market are all closely interwov-

This is what makes a decision so difficult and why the trade unions are so guarded about the problem. Only IG Metall, the engineering union, has shown any sympathy for the robot tax.

In a 1982 resolution, the DGB, the trades union federation welcomed "considerations" in this direction. It would go no further.

THE WELFARE STATE

Solution sought to pension funds' cash shortage

employers, the DGB wants to avoid anything that could endanger the pensions system. Until now employers and employers have contributed equally to pension insurance. The contribution is calculated according to pay or salary. The payment is a component of the individual's pay and entitles the employee to a pension.

Professor Schmähl of West Berlin expressed it in this way: "The employer's contribution is for the account of the employee and the employer's share contributes to the size of the pension."

The robot tax proposal has been criticised by the association of West German pension insurers. The head of the association Kolb fears that if pensions cease to be linked to salary the individual's entitlement to a pension would be endangered.

According to Kolb, Basic Law offers protection for a pension in a manner similar to the way property protection is given by the law.

This means that legislators have limitations on how they can alter the pension

If the contribution was governed by

net production this would weaken the relationship that has prevailed until now between contribution and pension.

The employer's contribution would no longer be put to the account of the insured person, and consequently would not be regarded as part of the pension paid on retirement.

The Federal Constitutional Court has ruled that the protection offered at law of the employee's share would be reduced if a contribution such as a robot tax was made legal, unrelated to salary. Kolb believes that cash raised in this

way would be at the "disposition of the legislators". He added: "The legislators acquire a room for manoeuvre that we can no

longer influence. He came to the conclusion that this would lead to a levelling out of pen-

Pension insurers take the view that a reduction in the protection given to an employee's pension, paid in over many years, is the main objection to a robot

The importance of the deutschemark

as an investment and reserve currency

sure we must counteract.' In other words, petrodollar investors and foreign central banks have parted company with some of their deutschemark investments over the past few years and invested in the dollar instead.

The exchange rate of the deutschemark has come under presssure as a consequence and the Bundesbank would prefer to see the German currency regain the prestige it enjoyed as a potential revaluer.

An important step in the direction of climinating handicaps has been taken now stamp duty on German bonds has been scrapped for foreign investors.

It was, Herr Pöhl says, a step in the right direction, and further steps are under consideration.

The same goes for innovations that have come into their own in other markets and from which the German market cannot in the long term be excluded.

But the Bonn congress made it clear that what both the Bundesbank and commercial bankers would like to see is likely to clash with the many regulations the banking supervision authority exists to enforce.

There was a foretaste in Bonn of this clash between forward strategy in financial dealings and the supervision authority's terms of reference.

Wolfgang Kuntze, president of the Berlin authority, warned banks not to use innovations to undermine yet again the latest amendments to the Credit

If foreign subsidiaries of German banks were to issue notes rather than loans, they were, in his authority's view, to be considered securities that counted toward a bank's mandatory credit ceil-

Herr Kuntze justified this opinion, which runs counter to established practice in Eurocredit markets, by saying that notes could not be discounted as irrelevant for calculating credit ceilings

because they did not have an official stock market quotation.

This viewpoint meets with little understanding in practice because even US Treasury bonds are traditionally not quoted on the stock market.

Market dealings in fixed-interest government bonds are in any case a typically German speciality, whereas in the dollar market fixed-interest bond rates are simply phoned through from bank

This difficulty, that of granting only officially quoted securities certain privileges, exists in domestic investment dealings too.

In one respect the Bundesbank goes even further than the commercial banks in the market liberalisation it would like to see come about. It would like to scrap the capital market committee that supervises deutschemark bonds raised by foreign issuing institutions.

The Bundesbank clearly seems to have been prompted to suggest liberalising bond issues by subsidiaries of foreign banks in Germany.

In other words, you can't have one without the other — even if the German capital market were to face extra difficulties as a result.

Herr Kuntze stressed in Bonn that the banking supervision authority agreed everything that wasn't expressly banned was permitted.

But that didn't mean carte blanche for

The small print is definitely where the difficulties lie in derestricting financial markets. In individual instances the

Modification

banks, the Bundesbank and the banking supervision authority will need to get together to breathe life into Herr Pohl's endorsement of deutschemark internationalisation while respecting limits to

Herr Pöhl himself had this to say: "I don't believe we must go as far as setting a free-trade zone for Euromarket transactions along American lines in this country.

"But it would be desirable if certain modifications to minimum reserve provisions were to make it possible to handle a certain amount of Eurodealings in the German market."

Does that amount to partial endorsement of the idea of a Euromarket place in Germany? There were, Herr Pöhl said, to be no more taboos.

Heinz Brestel (Frankfurter Allgemeine Zeitung für Deutschland, 28 March 1985) Russians seek alternative to the dollar

Moscow is on the lookout for an alternative to the dollar in international business transactions. Bundesbank president Pöhl and other German bankers returned from a visit to the Soviet capital with this rumour some time ago; it has now been confirmed.

From the Soviet viewpoint the deutschemark and sterling are strictly limited in their suitability as an alternative. What, then, about the Ecu, the artificial currency that is gaining ground in Europe even in the private sector?

Soviet state bankers have asked their estern counterparts this question.

Moscow is bound to see using the Ecu as a regular denomination as an interesting possibility: partly as a countereight to the dollar, partly as a means of gaining access to loans at favourable in-

The European currency unit can hardly fail to be a tempting mixture in transactions with countries such as Italy and France with their high interest

By the same token countries that have difficulties in financing exports to the Soviet Union on account of their high interests are bound to be tempted by the idea of dealing in Ecus.

French credit facilities, currently amounting to an effective annual interest rate of 13.6 per cent, are too expensive for Soviet principals.

That was why the Franco-Soviet joint economic affairs commission, meeting in Paris, has agreed to use the Ecu as the unit of account in financial transactions between their two countries.

This agreement confirms what for months has been a clearly ascertainable Soviet trend, including activities in Euromarkets.

Not all Western European countries welcome this strengthening of the EMS currency unit by the East Bloc and the Soviet Union of all people. As one banker put it in Moscow: "Frankly, that wasn't what we had in mind"

The time was certainly not yet ripe for reorganising the financing of trade with the East Bloc on an Ecu basis, as suggested by the Soviet Union.

Where the Federal Republic of Germany was concerned, for instance, Moscow did not even stand to gain in terms of interest rates.

All bankers concerned are well aware Continued on page 9

termined?

Later retirement for some is a possible answer

Deople have more and more leisure time in West Germany, more holidays, fewer working weekends, carlier

Only two out of every five West Germans are today working. Only forty per cent of West Germans create the material basis for themselves and the other sixty per cent of the population.

There are 6.4 million West Germans between the age of 58 and 68. A million are working and 100,000 are unemployed. The remaining 5.3 million are in retirement. And this begins "in a man's prime", on average at 58.

Pension insurance shows that on average men go into retirement at 57.9 years of age. The figures show that 49 per cent of new pensioners are on average 54 years of age. The legal pensionable age of 65 is on paper only.

At the same time that the population is in decline life expectancy is on the increase. Males who retire today at the age of 54 have a life expectancy of a further twelve years, women 19 years.

Fewer working people with a shorter The DGB sees the pensions insurance working week and working life (on averprovide for more non-workers.

It is no surprise, then, that Employment Minister Norbert Blüm is thinking of extending working life after 1990. The SPD and the trades unions have

accused him of programming "the dismantling of social achievements". But how else can the pension burden be shared out? The second question is: how contented is a 54-year-old man or her newly-won freedom".

who is freed from the obligation of having to go to work.

The first question can be easily answered. If working life is not made more flexible and no solution is found (such as a "robot tax") contributions will have to increase considerably and pension benefits will have to be reduced. In forty years' time a worker must provide for one old-age pensioner.

The second question has been answered by the BAT leisure research institute in a paper "Leisure in retirement" by Professor Horst W. Opas-

chowski. People taking early retirement today between the ages of 58 and 68 (born between 1916 and 1926) "lost their youth between two world wars." Professor Opaschowski maintains: "The generation over 58 have only a limited education background in comparison to the population as a whole. Eighty-five per cent of this group only have elementary schooling as opposed to 58 per cent of

the total population." This generation, he says in his study. "feels neglected". They observe how the succeeding generation enjoys a better education, leisure time and consumer possibilities. Behind the high expectations this generation has of retirement "there is concealed the secret wish to make up for what they have missed."It can be understood then that 73 per cent of the 58- to 68-year-olds in retirement are "satisfied" with their leisure time. Every fourth pensioner, however, is "disappointed" or "dissatisfied with his

This is particularly true of young pensioners who can no longer satisfy their And it can be asked if working life urge to have something to do. Detween 12 and 15 Santana cars are D built each day at the VW Shanghai works. They are put together by hand.

But this only the beginning for this joint Chinese-German project. It is hoped that the works will be able to get into the whole of South East Asia with Santanas, the Audi 100 and with various station wagon models.

It is also hoped that VW motors will he supplied to other motor manufacturers in the region.

Technical director Hans-Joachim Paul says that China has a billion people, and that if in the foreseeable future only one in 10 were to own a car, that would represent a market of 100 million vehicles.

The works is about 40 kilometres, or an hour's drive, from Shanghai, China's second largest city (population: 12 million). Volkswagen has half the equity. The

rest of the DM200 million capital is held by the Bank of China and two Chinese tractor and car firms.

When the premier of Lower Saxony, Ernst Albrecht, visited the works, there was not very much physically for him to

Only part of the factory has been built. The paint shop is in operation and production is being carried out in workshops formerly used by a Chinese firm to make the three-wheel cars which are widely used in China.

This is an interesting experience for Germans working on the project. Recently, a departmental head of the manufacturing subsidy, VW Shanghai, was wanted for a meeting. But he was nowhere to be found.

After a desperate search, he was discovered on ther factory floor - sweeping it. A West German technician asked with some astonishment what the man was doing.

The reply was that the party leadership required him regularly to do manual labour so he would not lose touch with the working class.

The man had followed the party directive with neither difficulty nor com-

Paul wants the best and the newest so that production will increase rapidly. He wants to impress upon the Chiing a degree of independence. Everyone should know who and what

that the Russians will use the link to bring in container cargo for the Far East.

Shipper interests and the major trans portation organisations have ben july planned for 14 October. guarded so far because precise delait it as the Americans are currently are not yet available.

Technical details about cost and or infra-structure at Klaipeda and at Inventure at so not yet available. vemunde are also not yet available.

There has also been no clarification ledday is likely to be no more than about which turiff would be applied at 20 days, however, as Nasa is goods carried to Schleswig-Holsten interested in seeing its German and what would be the costs of conver timer airborne smoothly and acing West German wagons to the Russian Faglo schedule. gauge and vice versa.

Russian railways use a wider gug than Western Europe.

It is at this point that transport poli considerations come into their one There is no sense in having a cargo handling depot where transport cos are higher and there are delays.

It was originally conceived that there would be a terminal where the wagoni were re-axled for both rail networks.

The best place for this would be Klaipeda because rail wagons with it normal gauge arriving in West Germs could proceed without delay.

In addition the ferries could be use on other routes. It is obvious that the Russians woll

not agree to this. The chaotic organisation of the Se

viet railways means that the wagons the can be re-axled are in service all of the Soviet Union, not just on the route to and from Klaipeda.

Even if the total cargo volume came on the land route were transferred the sea route the volume would in make full use of the service's capaciti as it is at present envisaged.

On the other hand it would only b possible to increase Russian-West man trade by a ferry link if there is guarantee of continuous cargo traffic a rail wagons.

There is uncertainty that the Russia are prepared to make political conce sions to have the re-axling operation a Klaipeda, for instance.

At the present the situation seems be that in ordinary free market cond tions there is an inadequate volume cargo for the ferry service, so the Ros sians will try to attract cargo at a poli cal, or dumping, price.

The Russians have acquired pleaty know-how onhow to do this in interm tional liner shipping.

facts at first hand for an annual DM50 plus p&p.

also the first mission for which a non-US user has hired the exclusive services of the space shuttle.

The Bonn Research and Technology Ministry is paying Nasa DM165m of project costs totalling DM394m. This payment is to cover the cost of launching, flight and other services provided by the US agency.

The Bonn Ministry must also pay for the use of the Bremen-built Spacelab. After its maiden flight in December 1983 the capsule became Nasa proper-

This provision formed part of contractual undertakings entered into more than 10 years ago.

On its D-1 mission Spacelab will fly in almost the same version as in 1983.

The pressurised cabin where astronauts will carry out experiments is again to be housed in the capsule's loading bay. A research platform with a variety of equipment will also be located outside the cabin.

Some of the 70-odd experiments assembled in Bremen have already been up in space; others are new develop-

They will be supervised by six astronauts, including two Germans, who are to work round-the-clock in shifts throughout the mission.

The Germans are physicists Reinhard Furrer, 44, and Frinst Messerschmid, 39,

They will be accompanied by Wubbo Ockels, 38, from Holland.

Ockels was stand-in for the first German astronaut, Ulf Merbold, in 1983. Merbold is also a member of the D-I team and training with them.

But he is only a substitute this time and will be at the space operations centre to maintain radio contact with the

The five US astronauts will either work alongside the others in Spacelab or man the space shuttle's controls.

Space shuttle Columbia will be supervised and controlled from Houston as hitherto, but all experiments will for the first time be supervised from an ops centre outside the United States.

It will be the GSOC, short for German Space Operations Centre, in Oberpfaffenhofen, near Munich, which was set up in the early 1970s to monitor German satellites and space probes such as Aeros, Symphonic, Helios and others and is now being converted to

handle Spacelab. Most space experiment staff will be at Oberpfaffenhofen to follow their progress and will in some cases be able to

evaluate findings themselves. They include universities and research institutes and private firms from all over the Federal Republic of Germany. Other experiments are sponsored by Esa, the European Space Agency, Cnes, France's National Space Research Centre, and Nasa.

Facilities include a process chamber where currents, heat and mass movement in melting and solidification processes at zero gravity are to be tested.

Continued from page 7

that Moscow is testing its case with political aims in mind and pursuing a Europe and America in both financial and arms markets.

The Soviet Union does not pretend to be happy with the preeminent role of the dollar in world trade. From the Kremlin's point of view its strength is little short of an insult to the rouble.

For political reasons the rouble has been revalued on a par with the dollar and is now vastly and unrealistically overvalued.

The political objective of Soviet financiers, who do nothing unpremeditated or without the approval of political leaders, is a point Western bankers would do well not to lose sight of.

Peter Seidlitz (Handelshlatt, Düsseldorf, 11 April 1985)

The materials laboratory will be back in action (it was on board the first mission, a joint Euro-American venture).

The materials lab will house three kilns where metals can be melted, new alloys produced and crystals bred. D-1 will even boast a miniature botanical

If will feature watercress roots, maize shoots and aniseed cell cultures. Their growth is to be studied in outer

Biological and medical experiments will be undertaken alongside the botanical variety. Tadpoles' development will be studied. Astronauts' vein pressure and, for the first time, pressure inside the eye, is to be measured.

Adaptation of the human sense of balance to zero gravity is to be tested by means of the vestibule sledge, a seat on runners mounted in the central corridor of the laboratory.

It can be moved to and fro to exact specifications by a tow-rope and elec-

This acceleration is combined with stimulus of the inner ear, which is where the human sense of balance is located, and striped patterns for eye

For this purpose the astronaut will wear a special helmet recording eye movement in the dark by means of an infra-red closed-circuit camera. Pulse, breathing and skin readings will also be taken.

Nuclear timepieces and antennas for the Navex experiment are housed outside the pressurised cabin. Navex will test navigation and chronometric synchronisation aimed at accuracy to within about 10 nanoseconds, or billionths of a second.

The process is also devised to enable Spacelab's position to be measured to within 30 metres.

D-1 will not be a one-off mission. The Bonn Research and Technology Ministry last year began paying Nasa instalments toward the cost of a D-2 mission scheduled for 1988.

D-2 will be designed to reuse the present payload as far as possible. It will also be laid on to give new users access to outer space.

This follow-up mission must be seen in connection with projected European participation in a US space station. In 1988 payloads and operation systems will be tested for Europe's Columbus space station module.

Ernst Jünger, controversial great loner, sees in 90

KielerNachrichten

Ernst Jünger, who celebrated his 90th birthday on 29 March, is one of this century's most controversial German writers.

He has the reputation of being the great loner of German literature and his works have always provoked conflict.

It is often claimed that he has more critics than readers; he is either highly respected and admired or rejected. A compromise is impossible.

The sharp criticism of his views has accompanied him for four decades.

He is often accused of being complacent, unremorseful for some of his past inconsistencies or arrogantly prophetic.

This, it is often claimed, is rooted in his fundamentally anti-democratic atti-

A number of writers with left-wing leanings, on the other hand, such as Erich Fried or Alfred Andersch feel that Junger has courageously accepted personal responsibility, shown chivalry and

philosopher Wilhelm von Humboldt.

However, Jünger's novel Auf den Marmorklippen, published in 1939, is a clear anti-Nazi lampoon.

Jünger was never an active nor passive supporter of the Nazis. Neither was he an opportunist.

However, there are serious contradictions in some of his books which displease today's readers, leaving them wary of him.

Books such as In Stahlgewittern, Der Kampf als das innere Erlebnis. Die totale Mobilmachung of Der Arbeiter - Herrschaft und Gesalt made Jünger a writer acceptable to the Nazis, for in these works Jünger glorifies soldiery and war.

However, they ignored the fact that Jünger regarded himself as greatly superior to Hitler's supporters, whom he felt to be plebeian and vulgar.

Jünger, a pharmacist's son from Heidelberg, felt cramped by the narrow milieu of bourgeois family life. At the age of seventeeen he fled to

France to join the foreign legion and could only be fetched back to Germany following intensive efforts by his father. He was neither a democrat nor pacifist, monarchist nor a German National

More than anything else, he was a conservative anarchist, a "Prussian", as he calls himself in Das abenteuerliche Herz published in 1929.

In this book he sees himself as an anarchist, who "wanders through the chaos of the world seeking guiding

principles for a new order, armed solely with the categorical imperative of the

Jünger was a voluntary recruit during the First World War, in which he was injured fourteen times and received the highest military decorations including the pour le mérite order.

His almost metaphysical account of his wartime adventures in In Stahlgewittern is early proof of a cool and abstract analytical approach to writing.

Jünger already showed himself as someone who was fascinated by the character of war rather than inotivated by the vision of overcoming it. This characteristic can still be found

in later works, for example in his book Die Zwille written in 1971.

Here, at the age of almost eighty Jünger uses the two-tier metaphor of the

horrific and the sudden to portrag younger days. Is it exaggerated lock that Jünger was consistently eman in a web of contradictions?

Husband and wife allowed each other "total freedom." Their letters, filling seven volumes of which only a selection has been published, make delightful

He first dealt with constitutional theory and sought to delineate the "limits of efficacy of the state." Then he came under the influence of Schiller and moved to Jena, where the poet and playwright was a university teacher.

He was a favourite partner in discussion with Schiller and soon came to be on good terms with Goethe too, as evidenced by his 1799 book on Goethe's Hermann und Dorothea.

Humboldt had yet to arrive at a style of his own. So he withdrew from the overwhelming personality of Schiller and settled in Paris.

Further "years of wandering" took him Spain, where regional dialects prompted him to devise a method of linguistic comparison that laid the empirical groundwork for his later philosophy

He eventually arrived in Rome, which he felt was a "world university," and intensified his linguistic studies.

The humiliation of Prussia by Napoleon prompted him to return to Berlin and offer his services to the govern lessons of the Pharach — From the ment. collection of archaelogical trea-A sures from the province of Zhejiang in south-east China is being exhibited at Phantasialand, a leisure park between Bonn and Cologue.

The exhibits, all between 100 and 7,000 years old, will be on show for se-

The exhibition shows the significance and advanced development of Chinese culture over thousands of years.

The halls have been painted black. In illuminated show cases there is jewellcry, musical instruments, agricultural tools and blue-green ceramics.

Those who follow the suggested route through the exhibition move in a spiral ever deeper into the world of "the Middle Kingdom".

A head-dress made of silk glitters in gold in the cool light of one of the show windows. It comes from the Ming Dynasty and is about 600 years old.

A figure riding a horse, that was placed in a grave, is estimated to be 1,500 years old.

A mirror, decorated with people, a cart and horses was a much-valued household utensil in China 2,000 years

A three-legged kettle in bronze is 700 years older. The craftsman of the time

Gottlieb Löffelhardt, part-owner of Phantasialand, and helper Lida Han with (Photo: Phantasialand Brühl) 1600-year-old ceramic container.

incised fine lines into the metal handle. The visitor can pass from the dark halls into the sunlight of the present and see Chinese artisans at work. There are woodcutters, silk is painted, a girl calli graphist writes characters with her thick brush on flimsy paper. And a young girl does embroidery in silk.

The Chinese from the People's Republic are guests at Phantasialand for seven months.

Obviously the background to the event is business. Gottlieb Löffelhardt and Richard Schmidt, owners of Phantasialand, "are selling" their knowledge of the leisure industry to the Chinese.

About six months ago they went to China to look at a site where the Chinese could set up a similar leisure park.

As a kind of "payment" the Chinese brought their artisans, cuisine and valuable exhibits on loan from the Zhejiany Museum in Hangzhou, the capital of the province.

When in seven months the new attraction in Phantasialand comes to an end the Chinese will get in return amusement attractions and technical know-how.

The guest visit is taking place in "Chinatown", which Schmidt and Löffelhardt set up four years ago as a monument to their fascination with

In 1970 they went to Nationalist China, Taiwan, travelled through the country with a camera and obtained from hundreds of photos an idea of the building style in the country.

From these details they were able to reconstruct with exactitude Chinese pagodas and temples.

Chinese artisans made piece by piece the roof tiles in the old, traditional style, constructed roof-ridges decorated with dragons, shaped ornaments and shipped them all to Europe.

In 1981 Chinatown in Phantasialand was ready - a synthesis of the most modern techniques and handicrafts embellished by saga and myth.

Bulin child psychiatrist Hans Keil-

It is a castle dating back to 1848 and a home from which Schramm, who comes from Bielefeld, defies authority in this small village near Bayreuth in Ba-

Bavarians view him with suspicion, first as a Prussian, as north Germans are disparagingly referred to by true-blue Bavarians, and also as a student of such a dubious subject as geo-ecology.

Studying the subject is bad enough What makes matters even worse is the fact that Schramm, 28, also practises his theory and recycles his domestic waste instead of leaving it to the tender mercies of the garbage men.

He has been at loggerheads with the local authority and decried as an ecoterrorist for the past six months for refusing to take a dustbin or have anything to do with the official refuse disposal service.

The local authority has threatened him with litigation and punitive fines to force him to accept a dustbin he claims he can well manage without.

He opens the door and turns out to be slender and of medium height, wearing jeans and a maroon pullover. He is fairhaired, bearded and has a lean, sad face with a slight grin.

He clearly seems to be more of a Till Eulenspiegel than a Michael Kohlhaas or a Don Quixote; he is a practical joker rather than an untiring campaigner on matters of principle.

"Come on in," he says. He bought the old farmhouse for DM70,000. He and his wife Ute have renovated it in keeping with the original style. The previous have to go into town I take all the plastic owner had it listed as a historic monu-

newspaper.

■ THE ENVIRONMENT

'Ecological terrorist' battles council over rubbish

THE GERMAN TRIBUNE

ment, he explains, to prevent it from being demolished or left to run to rack and

Where are his eco-dustbins, or raw material containers, as he prefers to call

"The compost bin is in the kitchen," he says. "We use it for all food left-overs and other organic waste that is then dumped on the compost heap at the bottom of the garden."

There are small intermediate storage facilities for glass, metal, plastic and miscellaneous waste in the hall. Their contents are sorted in the outhouse.

In the outhouse and the barn there are larger boxes for tin cans (mainly cat food cans), textiles, paper, plastic and special waste (the official euphemism for toxic waste such as spent batteries).

How does he get on with plastic? One of the boxes is full of shampoo bottles, yoghurt beakers and plastic bags that once contained crackers.

"Well." he admits, "plastic recycling isn't properly organised yet. The nearest container for plastic waste is near Munich (two or three hours by car). When I

ly publicised. "One of these days," Schramm says, there will be men who have made millions out of plastic waste just as there are already millionaire dealers in waste of

other kinds." Waste dealers in his part of Germany still earn more from the burnt-out hulks of US tanks and spent artillery shells than from Schramm's old tin cans, but small livestock also supply manure, as the German proverb has it.

In return Schramm strolls round junkyards on the lookout for waste becan put to good use: a rusty old bicycle frame or a length of piping, for instance.

Measure for measure, or tit for tat among junk dealers and pioneers in the recycling trade? Schramm says about a quarter of his furniture has been retrieved from junk yards and scrap

A teacher's son from Westphalia, he first had the idea of recycling waste when he worked in an old people's home as a conscientious objector after leaving school. He asked residents not to throw glass bottles and jars into the dustbin. Glass could certainly be sold direct to a waste dealer.

The old folk willingly left bottles and jars outside the door for collection. Some may have been a little self-conscious about their consumption of beer (or whatever) and have left the telltale bottles outside someone else's door, but at least they didn't throw them straight into the dustbin.

Within a year the old people's home was able to discontinue three garbage containers, saving a tidy amount of mo-

ney in refuse collection bills. In 1978 Schramm, 21, and his girlfriend and wife-to-be moved to Bayreuth to study geo-ecology. Bayreuth is the only college in Germany where the subject is taught. He is taking his final exams right now and will then be doing

It is hardly worth industry's while recycling household plastic waste because various grades of plastic cannot be

There are firms that recycle plastic waste, but they usually only handle industrial waste in substantial quantities and specific qualities.

They melt, press or convert into granules recycled plastic that manufacturers are happy to buy at prices of between 40 pfennigs and DM2.50 per kilogram. But household plastic has to be sorted, which makes recycling more expensive.

"Industry ought to be obliged," Schramm says, "either to use a standard grade of plastic for certain products, such as shampoo bottles, or to identify materials by means a code-number to enable consumers to distinguish separate grades."

As so often, charities are pioneers in the recycling of waste. A Christian group not far from Schramm's village collects garbage of all kinds, including

Waste is sorted to the best of the group's ability and sold to various buyers, most satisfactorily in many cases, for 60 pfennigs a kilogram.

Large-scale trials in various localities have shown that the public are prepared to do much of the sorting. Up to 90 per cent of plastic waste has been dumped at special collecting facilities sufficient-

> exclusively with their waste. "It's not just the money they want 5 charge for the service." Schramm # plains, "They need what they call was for their incinerator. It generates post and they are under contract to supply

Rölner Stadt Ameiger

They are unable to explain, Keilson says, because the truth, the industrial mass destruction and processing of human bodies, is so unbearable and an abyss of hell on earth for which words are inadequate.

The survivors' children are now asking questions. They have often tried to do so, but in vain.

As often as not the result is similar to the tale told by Professor de Wind, a Dutch psychoanalyst, about the son of a concentration camp survivor who was supposed never to ask about the framed photographs of his grandparents on the

When he disobeyed the ban and one evening at dinner tried to ask his father about them his mother, who was not a Jewess, kicked his shin under the table to warn him not to bring up the subject.

Questions are growing more urgent as children suffer from their parents' silence and from behaviour and oversensitive reactions they are at a loss to ex-

A daughter may find it odd that her father never answers the telephone himself. He has all calls recorded by an answering device.

She may suspect what fears of death and persecution lie behind this kind of everyday "vanishing trick," but her father, who spent months hidden under a pile of potatoes and survived concentration camp, has never told his children what life was like.

"I guess that was his way of handling the return from Auschwitz and another world to planet Earth," says a Frankfurt psychotherapist.

Alongside the widespread silence born of shock there is now a fresh trend. After decades of refusing to talk about the dreadful past some concentration camp survivors now feel an overwhelming urge to communicate.

"At a historic distance of 40 years," says Cologne psychiatrist Professor Marneros, "they now seem to have found the words they lacked for so

Professor Uwe Henrik Peters, head of the neurological clinic at Cologne University Hospital, agrees.

Professor Peters invited 20 fellowdoctors, mainly Jewish psychiatrists and psychotherapists from Germany and Holland, to Cologne to help launch an international group of specialists in "psychiatry of persecution."

Doctors, some of whom were themselves survivors of Nazi terror and for years have worked as expert advisers in compensation proceedings, discussed identification problems in the second and third generation among persecutors and the persecuted.

They were agreed that the traumas of nations remained alive and continued to be effective for generations and even centuries.

What is new about post-Auschwitz psychiatry, as Professor Peters puts it, is that even adults can be so shaken by certain events, even individual experiences, that they are no longer able to regain their former personalities.

All their behaviour for the rest of their lives will be influenced by the persecution they have undergone.

In the past the Freudian version of imprint, the view that experiences in early childhood were decisive, pre-

According to Freud what we experience after the age of four is no longer so important for personal development because the foundations have by then been

This view must now be abandoned. "If there is a lesson to be learnt, psychiatrically speaking, from these holocaust experiences," Keilson says, "then it must surely be that even adults can be given a totally different imprint by undergoing violence and terror."

destructive effect of past persecution on the mind of the survivor; knowing nothing about his past they are likely to consider him eccentric or overwrought.

Loss of home and family, of native language, years of threat to life and limb and unbelievable experiences have resulted in many people persecuted during the Third Reich still suffering from extremes of anxiety and insecurity.

They react oversensitively to any kind of setback or seemingly humiliating treatment at the hands of authoritarian structures, as Professor Peters puts

An unfriendly word from some civil

servant or other, being called to order by a police officer or a swastika daubed on a cellar wall can cause days of agitation up to and including panic.

"What is so disastrous," Professor Peters says, "is that these people run a risk of being branded yet again. Someone is sure to conclude that only psychopaths survived."

Survivors and their families often fail to see why they are so frequently at odds with their surroundings and why they are passive and depressed, aliens in their own world, as it were.

Many survivors strenuously avoid recalling anything they underwent yet are constantly in inner mourning over their loss, combined with a feeling of guilt for having survived.

These feelings may well remain concealed until a single experience breaks the spell. One such person as a fouryear-old saw heaps of corpses, but his crucial experience was seeing his father nailed by his hands and feet to a plank.

Forty years later he went beserk for no apparent reason at a carpenter's.

It is hardly surprising that most survivors' children, often children of survivors whose entire families were wiped out in concentration camps who then immediately remarried after liberation. were unable to grow up free of anxiety.

Frankfurt psychotherapist Dr Kaminer says of this second generation that it bears the names of the dead and has no grandparents and that the more keenly its parents felt their grief the less they will have talked with it about the dead.

They may have felt unable to pass on anything about them, but their children soon came to register the messages that failed to come across and to take stock

It is far from unusual for traumatic experiences to have been transmitted in this unspoken way. A boy may tell his father about nightmares he suffers from only to learn that he has dreamt exactly what his father went through at concentration camp but never told him about.

Psychotherapists wonder how the child can have come by the information. Could the parents possibly have whispered it to each other?

Kaminer is in his late 30s. His parents were persecuted Jews. He says the mental state of the second generation, children mostly born in German camps in 1946 and 1947, is heavily overburd-

Many would often have preferred to be dead or felt that part of themselves was not alive. They built a memorial to the dead within themselves, as it were.

At the same time this often gave expression to a desire to come closer, in an unconscious manner, to part of the

In many cases they identified with their parents in showing signs of sudden duliness and absentness such as are common among survivors.

Careful registration of and research into the lasting consequences of violence are not, specialists associated with Outsiders are unlikely to notice the the project say, intended to lead to a general psychopathology of survivors and their children.

The aim of the exercise is to bring together everyone in psychiatry who is working on the persecuted all over the world. What they want to accomplish, Professor Peters says, is "to make us historically aware of the fact that violence always makes a psychological mark that can influence families' lives for centuries."

The Third Reich years cannot, especially in Germany, be dismissed as a closed chapter in the book of history for which parents alone are to blame.

Church helps cravers beat the burning yearning

Kölner Stadt-Unzeiger

Lutheran church group in Ham-Aburg runs courses for people wanting to cure themselves of addictions.

Alcohol and tobacco, of course, head the list of vices, but there are many others: sweets and television, for example. One man even wanted to give up criticising other people.

The aid group runs short-term programmes to get people started on the straight and narrow and long-term programmes to prevent backsliding.

A seven-week programme began on Ash Wednesday under the sponsorship of the church's North Elbe public relations department and Blickpunkt Kirche (Church Viewpoint), a Hamburg newspaper.

One who joined up on Ash Wednesday is Herr K., the manager of a firm which has had to dismiss part of its workforce. The experience drove him to drown his sorrows in drink.

A 13-year-old schoolgirl is trying to stop her craving for sweet things. She says she has only just realised how much she consumes "and it is a lot."

She has joined the programme for

Besides, an end to the problem of lasting traumas in the wake of terror, murder and war is nowhere near in sight, or

so psychiatrists say: "Similar occurrences recur all over the world, even though they may not be as dramatic as they were under the Nazis. Concentration camp experience has taught us to understand what mental

In view of its historic burden, Professor Peters says, the Federal Republic of Germany ought to play a leading role in

psychiatric research into persecution. Yet so far not a pfennig in public funds has been provided for the project, which is

shortly to continue with a symposium. "The situation is," he says, "that the few people who are looking into a cure for this gravest of wartime wounds inflicted by the German people are having to foot the bill themselves."

Annelie Stankau (Kölner Stadt-Anzeiger, Cologne, 4 April 1985)

support - she wasn't getting any from her fellow pupils in her efforts to change. They "ask if something is wrong

A woman says her addiction was watching Dynasty on the television every Wednesday night.

Letters from the addicted arrive almost daily at the campaign offices. There has even been one from Austral-

The project began several years ago with a few hundred people. By last year more than 10,000 were estimated to have taken part.

Pastor Martin Bethge says people can give up what they want to for as short or as long a time as they want to.

The seven-week programme was a starting point for people to give up something that they had long wanted to give

So Passiontide, the two weeks before Easter, was used to fire the enthusiasm. It also created a link to former times when fasting over this period was not an exceptional event.

There are no limits to aims people set themselves and not everybody is Christian. One person has personal problems, another wants a rest from the surfeit of

the modern state. What many Christians think is reflected in one sentence: "You cannot feel the passion of Jesus if you are sitting up

to the neck in cream." Letters of encouragement plus a calendar are used to keep the cravers on the right track. The letters spell out the problems involved in giving up a vice, how backsliding to old habits happens and lists

possible causes of a breakdown of the will. Expectations are high among the cravers. A man who gave up alcohol admitted freely that alone he didn't have

the resolve and the discipline to give up. "I need support." For those whose addiction is entrenched, much more is needed than a simple short dose of abstinence. The initial letter of encouragement in these cases admits that the project cannot fulfil all expect-

ations. It could only touch on the problem. One man wrote: "My wife and I are both 73. We have been smoking since our youth. We've tried over the years to give up, but without success.

"My wife has had a coronary and l have had a heart attack. We know the dangers of continuing to smoke but still cannot stop. If you think that you might be able to help us, we would be ex-

tremely grateful." Naturally, the campaign wants to help. It hopes that by taking such an interest in problems of this sort it might help awake a new relationship between people and the Karsten Plog (Kölner Stadt-Anzeiger, Cologne,

Boys' dream is man's nightmare

hildhood dreams of being an engine driver do not match up to the facts, an investigation has revealed.

The life of the engine driver is not only not glamorous, it is also a threat to both mind and body, the survey shows.

A team from the institute for sociology at Oldenburg University under Professor Bernhard Badura questioned 274 engine drivers from northern Lower Saxony. He said this is a representative sample.

Half the drivers were being treated by doctors, presumably for damage to health caused by working conditions.

The main culprit seemed to be shift work. Many drivers worked at nights and at weekends and spent nights away from home.

Noise, vibrations and cabin temperatures were among the causes. Working alone plus the weight of responsibility for transporting both people and goods contributed to physical and mental strain. The scoreboard:

- 66 per cent said they could not sleep
- 52.5 per cent said they were always nervous.
- 43.3 per cent had stomach troubles.
- 43 per cent had rheumatics.
- 36 per cent had heart and circulation 34.9 per cent often had headaches.

• 33.8 per cent often had trouble con-Drivers who worked special services in-

- volving particularly irregular hours were in
- an even more sorry state. Of these: • 74 per cent had problems sleeping.
- 69.8 per cent were nervous. 46 per cent had stomach troubles. More than half the drivers (53.6 per cent) had slipped discs. The investigators reported that in many old locomotives, drivers seats had no springs and as a result the vibrations were taken di-

rectly by the spine. The Bundesbahn was installing new seats, but the process was slow.

The study also revealed that the amount of smoking among drivers varied according to how demanding the job was. Forty four per cent of those with ex-

tremely irregular hours smoked but only 32 per cent of the others. (Frankfurter Allgemeine Zeitung

für Deutschland, 23 March 1985)

dividual cases of political torture, and arranges for the "adoption" of a political prisoner by a specific group. This is how the Bonn group became in-

volved in the Larrach case, and this system should prevent AI sub-groups getting involved politically.

Those who want to help political prisoners in western countries should also do something about political prisoners in the East Bloc, and no one should try to do things under the Al flag that do not fall into the organisation's three categories.

There is, of course, dispute, among Al members about where political "violence" begins and who are "non-violent" prisoners. In order to get clarification on this point there is a borderline committee in

The West German section has an office in Bonn with 22 workers. It appeals for donations (DM8 million a year), publish German-language literature and seek to influence politicians, diplomats and the

The outgoing general secretary, Helmut Frenz, acquired a reputation for as a courageous Evangelical bishop in Chile under Pinochet's despotic rule.

His successor will have to put up with the scepticism of some who complain because she was never a member of the or-

But she was asked to take over because, as a former Social Democrat MP, she will be able to find new ways through the Bonn political labyrinth.

The 11,000 West German Al members will not be able to complain about any lack of commitment. Frau Erler's engagement book is shows just how committed

She told me: "I cannot see you on Thursday afternoon since I have to demonstrate in Bonn." The demonstration is about the high treason trials in South Africa of 16 leading opponents of apar-

The self-imposed limitations of the orennisation do not mean that individual AOI members close their eyes to injustice, against which the organisation does not fight, Brigitte Erler explained. She said emphatically that she could not, and had no wish, to alter the organisation's

She said: "We have an awful lot of members who want to go flat out, would like to say like other ordinary people, 'They are swine in Chile', but if we, as an organisation, do that, we shall be completely ineffective."

In the 1970s West German Al was made up of young people, mainly students seeking a field of action outside the traditional, and in their eyes discredited, organisations. And there were those concerned with the Third World who regarded the objectives laid down by the London central office as too narrow.

A member in Bonn said: "We have lost many of these people to the Greens or to provide a farmer with a water pump." groups in the peace movement. Our new members are people who simply want to work for a good cause."

Frau Erler's background makes her suited to reconcile the differing motivations within the organisations.

She studied political science in West Berlin and was involved in the more intense phases of the student movement.

When she graduated she entered the Development Aid Ministry as a speech-

Brigitte Erler . . . believes ment aid is harmful

writer for Erhard Eppler and Egon Bahr, then as Africa consultant.

In 1976 she was elected to the Bundestag on the SPD list headed by Eppler in Baden-Württemberg.

Four years later — she was not reelected to the Bundestag - she returned to the Development Aid Ministry, responsible for Pakistan, finally for Bangladesh under CSU Minister Jürgen Warnke.A disappointed Brigitte Erler regards much development aid as being "fatal aid", a view that will undoubtedly become standard with the political left.

She maintains that much of it destroys the growing structures of poor countries and furthers the exploitation of the masses in developing countries by a small upper strata of society. That is not new but seldom illustrated so effectively.

Old friends in the left wing of the Social Democrats have requested her to tone down these themes for the benefit of the few worthwhile projects. She retorts that she does not know if there are any such projects.

Off the record officials in Warnke's Ministry have admitted that she is right — development aid only does harm.

Frau Erler said: "Development aid plays the same role in neo-colonial industrialisation as did Christian missions in colonisation. It calms down the indigenous people and soothes our consci-

Asked if development aid was so catastropic all over the world as it had been in Bangladesh she said: "Of course I get into a scrape when I try to go over the whole world with a broom. Bangladesh made me realise that a person who wants to do good can do the opposite."

Is AI a new approach to doing good? She thinks so: "My whole life has been based on a complex about helping. Society here is so complex that it didn't work here. My previous work failed only because I wanted to help people who could help themselves much better."

For this reason she decided to join Al. where I can do something so that he or she is not tortured and I know that this person cannot help himself. It is quite a different matter when Western experts

The latest Al annual report listed 2,390 abducted opponents of regimes in fifteen countries, 5,000 "adopted" polifical prisoners, 21,000 prisoners in Turkey alone held without due process of law, 5,000 hangings in China without a trial, and barbaric forturing.

For someone with "an aid complex" there is plenty to do.

Hans Jakob Ginsberg (Die Zeit, Hamburg, 5 April 1985)

Cancer girl finds mother

26-year-old women dying from leukaemia t A tacted her mother who gave her out for adoption shortly after the birth (see photo).

to donate bone marrow for an operation needed to save the daughter's life.

The daughter lives in Hamburg. Her mother disappeared shortly after the birth and was only found after a campaign in the Press and television which realised 300 replies.

The mother is the only known close relative and was needed

Doctors say that the daughter's survival chances with an operation are between 50 and 60 per cent. Without, she would die within months.

Eventually, Gisela Müller, 54, was discovered to be living in Düsseldorf. She has promised to help and is now being put through medical tests.
